DETAILED ACTION

Allowable Subject Matter

1. Claims 82-109 are allowed.
2. The following is an examiner's statement of reasons for allowance: in the environment of a linear displacement encoder comprising a fixed ruler having a first and second sides, a reading head for moving along the ruler, the reading head fixed to move along the ruler and having an electrostatic field transmitter disposed on the first side of the ruler and generating an electrostatic field, a receiver for receiving the electrostatic field and electrically-active pattern which modulates an electrostatic field received by a receiver,. The closest prior art Meyer '937 fails to teach or suggest a linear displacement device comprising the structural arrangement and the generation of an electrostatic field of the present application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Stokes et al '386 teaches a device for sensing rotational position

based on electrostatic measurement. However, Stokes fails to teach or suggest a linear displacement device comprising the structural arrangement of the present application.
